

RAPTURE

B - Vent

Superior masonry design and performance together with outstanding features is a clear departure from any other gas fireplace burner produced over the past 50 years.

www.FMIPRODUCTS.com

Elegant and Traditional Masonry Design

The Rapture vented gas fireplace has the aesthetic of a wood burner, but generates enough heat to compare to a direct vent. The enormous wood burning chassis features our patented Mosaic Masonry™ firebrick wall system which is indistinguishable from site-built masonry. Controls and gas lines are hidden beneath the hearth floor. True hand-forged andirons, a chain-mesh pull screen and a detailed hearth media kit complete the look.

Fireplace chassis are designed to accept a variety of Mosaic Masonry™ kiln-fired clay firebrick walls. The unitized ember bed ramp burner and log module come separately, allowing for future technologically advanced systems to be installed as they develop. The ignition system is fully electronic and features a 40% turn down capacity which can be operated by wall switch or the included remote control.

Electronic ignition and gas controls are accessible through the front hearth brick.

Premium log and burner are a unitized system. Patented ceramic Ember Ramp burner generates a smoldering glow.

Ivory & Red Mosaic Masonry™ Firebrick Wall Systems available in Herringbone & Stacked patterns.

Hand-forged andirons are included features.

Rapture Features

- Patented Radiant Heat Technology
- Electronic Ignition with 40% Hi/Lo Turn Down
- Hand-Forged Andirons
- Operates with Included Remote Control
- Approved ANSI Z21.50

Rapture Accessories

- Masonry Firebrick Wall Kits
- Bi-Fold Glass Door Systems
- Outside Combustion Air Kits
