Simple, yet powerful telematics

Our online telematics portal helps deliver driver safety and protection information to you within seconds of an incident taking place. That may be a road collision, an unsafe speeding event or when someone wants to know you're looking out for them.

GPS vehicle position data from the KP1S or KP2 connected camera is sent to the portal every minute so you can accurately track vehicles and replay the route via the simple-to-use Website.

Real-time video evidence

Incident notifications are delivered in real-time allowing you to review actual video footage within seconds and, where needed, remotely download more complex evidence to help support a claim. All this gives you instant control and fleet protection.

The power to back up your claim

With access to real-time and historical GPS position you can substantiate any claim - see exactly what happened, where it happened and how it happened. If there's a lesson to be learned there's no simpler, faster or better way to help educate your team.

The benefits don't end there! Industry statistics show that the faster any claim can be picked up and managed by your Insurer (whether you are at fault or not) the cheaper the claim is to resolve. The lower the claim cost the less impact it has on your insurance renewal/loss ratio. **It really is a win/win.**

Features/Benefits

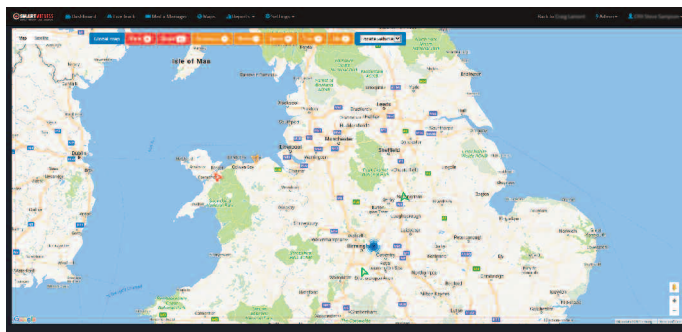

Dashboard Interface

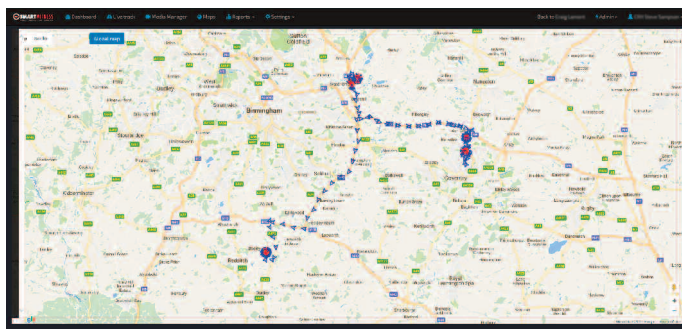

Access Vehicle Performance

Vehicle Location Overview

Route Replay

Features:

- 30 days storage on SmartWitness servers
- Dismiss/action driver behaviour alerts
- 10 second low cost, high quality snapshot images
- Download MP4 video remotely
- Audit trail of incident management and actions
- Google map integration
- Fleet performance reporting

Benefits:

- Easy to use
- Simple to administer
- Easily manage alerting
- See where your fleet is and where it's been
- Makes settlements faster, reducing overall claims spend - Instant access to video in the event of an incident
- Protect your insurance premiums with FNOL
- Essential for awareness and training - Driver behaviour analysis
- Improve risk management and road safety

Why SmartWitness?

SmartWitness are a world-leading designer, manufacturer and supplier of in-vehicle cameras, recorders and safety systems.

2007

The year we started providing in-vehicle cameras to fleet operators and commercial vehicle owners.

250K

The amount of vehicles around the world benefitting from SmartWitness protection.

35M

The amount of miles driven every day under the watchful eye of SmartWitness solutions.

10Y

The amount of time we have spent to date on R&D. We're constantly developing new products and technologies.

HD Evidence Captured

High-definition cameras capture crystal-clear images of inside/outside of the vehicle.

GPS Location Recorded

Built-in GPS/Glonass provides precise event location, route, vehicle speed & direction.

3G/4G Connected

Cellular connectivity provides real-time images, live location, and on-demand HD video upload.

Event Analysis

Powerful software is included with every system to review, analyse and backup video on your PC.

SmartWitness Awards & Accreditations

Today, SmartWitness is further bridging the gap between vehicle telematics and video with its lineup of network connected products and accompanying API stack.
