Dramatic Realism

It's easy to see how the Giant Timber's elaborately crafted log stack and radiant ember bed could be mistaken for a real wood burning fire. To maintain the integrity of the meticulously detailed bark, these colossal logs were cast from actual wood, then hand-finished to deepen the look of the split bark. The Giant Timbers are complete with authentic wood tones and deep charred wood patterns. Controls and gas train assembly are tucked away out of view to maximize the realistic scene.

A brightly burning loose ember presentation like this in a vented gas log heater can only be achieved through superior design and nearly perfect fuel combustion. The Giant Timber's considerable size deserves an equally large flame. The high efficiency ember bed creates a triple burner system that maximizes the beauty of the log set.

These massive logs are perfect for extra large firebox systems or large masonry fireboxes. The MFEB ember bed is available as an accessory. When in use, the ember bed brings the burner up to 70,000 BTU's. To accent the realism of the logs, the LAMF log accessory kit is also available. These six charred log additions create an even more authentic log presentation.

Vented log sets are available in remote ready or electronic ignition models. Electronic Ignition come equipped with the Skytech energy saving direct spark ignition and also a models include a remote control system with flame settings. All models are equipped with a safety gas control system.

Giant Timbers 36" Log Set with Optional MFEB Lava Rock Flame Bed.

Meticulously Detailed Logs Resemble the Look of Real Wood Logs.

Designed to fit the larger fireboxes of today! The uniqueness of this series is that the unit stands 19" tall and over 15" deep. 24" log sets are designed for 36" fireboxes, 30" log sets for 42" fireboxes and 36" log sets for the FMI 48" boxes or larger masonry units.
